

Trackmate Racing Infrared Kit Light Source For Slot Car Lap Counter.

Note that the LEDs are infrared and invisible to the human eye. Using a digital camera you can 'see' the LEDs glow white. The resistor will have slight warmth to it when circuit is working. The power adaptor we ship has the white stripe on the wire to indicate the negative side. You must use the resistor and ALL the LEDs or you will damage the LEDs.

The LEDs have a short and long lead. Connect as shown. The resistor has no polarity so orientation is not important.
